Era's Multilateration system in Khujand, Tajikistan

This letter confirms that ERA a.s. supplied a multilateration and ADS-B system to Khujand , Tajikistan for Air Navigations Services of Tajikistan (Tajikaeronavigation). The system serves as an independent source of position data for the entire area. Tajikaeronavigation was very exacting in their stated needs in terms of system performance and accuracy and the system as designed and delivered by ERA a.s. met, and in many cases exceeded, the operational requirements as well. The robust design of the outdoor system parts allows for a reliable 24/7 operation of the system in the rough service conditions which are prevailing in the Tajikistan mountainous area, specifically during the winter periods.

The delivery of this project was performed as agreed in the contract terms of the delivery. The contract was signed in June 2010. MSS WAM Khujand was installed by the end of 2010 and passed the Site Acceptance Tests in May 2011.

The contract included the supply of an 8-sensor wide area multilateration system and a complete solution for the data communication links from the sites to the central processing station placed at the Khujand international airport.

If you need any further information, please don't hesitate to contact the undersigned.
